PFAS Reporting under TSCA Compliance Statement

The United States Toxic Substances Control Act (TSCA) is a federal regulation that allows the Environmental Protection Agency (EPA) to comprehensively manage chemicals in U.S. Commerce. This includes reporting requirements under TSCA Section 8(a)(7), which apply to perfluoroalkyl and polyfluoroalkyl substances (PFAS). TSCA mandates the reporting of certain information from U.S. manufacturers of all PFAS chemicals, including PFAS created as manufacturing byproducts. Reporting is also required for PFAS imported into the United States, whether on their own or as an incorporated article component.

PFAS is a broad, general, non-specific term that encompasses a large and complex group of chemicals; TSCA PFAS requirements apply to the types of PFAS used in U.S. commerce, as defined by the EPA's Chemical Data Reporting (CDR) database. More information is available from https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/tsca-section-8a7-reporting-and-recordkeeping.

Fluoropolymers (PTFE, ETFE, PVDF, FEP, FPA) are a class of polymeric PFAS that are used in raw materials, mixtures, and finished products for various applications. Some materials used in our switch product lines are made with several types of PFAS, including PTFE and PFA, but this statement certifies that World Magnetics does not intentionally add regulated Per- and Polyfluoroalkyl substances and their precursors to its products during manufacturing. This declaration is based upon information provided to us by suppliers of materials that are used in the manufacturing of our products. These substances may remain as unintended impurities in very low concentrations in the fluoropolymers from our suppliers.

Product Information:

All DesignFlex, 2XXXX, H2XXXX, 3XXXX, 4XXXX, and GT series pressure and vacuum switches
